

Fire Incident Mapping Tools (FIMT) version 10.0.11 – Known Issues:

1. User's Guide has not been updated in several years even though there are many updates to software.
2. Create Incident dialog not updating correctly.
3. Loading multiple FirePoints in one import can sometimes not load coordinate values.
4. Occasionally, features will be created that have no geometry creating strange behavior.
5. Import of features that have Z values (both poly & line). More research is needed.
6. FireLineType split policy needs to be set to Duplicate
7. Ownership reports do not break on different Fire Names within the same GDB.
8. Archive tool may be losing some edits. More research is needed.
9. FIMT Layout toolbar not activating without FIMT GDB loaded. Most should not work without FIMT GDB.
10. FIMT tool command groups are generically named and need to be labeled as FIMT commands.
